

GREEN SKILLS FOR CITIES

Long-term Programme Self-assessment Questions

The Institute for Advanced Architecture of Catalonia

CONTENTS

1. Self-assessment Questions

3

1. Self-assessment Questions

Which of the following methodologies does not help us to design in / for uncertainty towards climate change adaptation?

Multiscalar design & Systemic design

Including time in design processes

Focusing on human centered design

Which of the following is not an output of digital tools such as urban ecological connectivity aimed to support design in times of uncertainty?

They can give designers a definitive design solution to the climate crisis in cities.

Empowering designers to engage with nature as an active partner in the process of urban design.

These digital tools can predict and allow us to visualize potential impacts of certain design decisions.

Define Renaturing?

Habitat restoration

Sustainable development

Ecological restoration

What is not considered Rewilding?

Reintroducing certain native species of wildlife into a particular area

Letting nature to take care of itself

Humans playing a significant role in dictating what nature does

How can designers use ecosystem engineers?

Designers should force ecosystem engineers to do as the designers want to achieve their desired output

Designers can drive the produced impact of ecosystem engineers towards
designated solutions

Designers can use ecosystem engineers to demonstrate the need to eliminate
certain invasive species
